

Heavens LLC Website

Final Production Specification, Content Guide and Implementation Roadmap

1. Project Identity

Legal company information

Legal name: Heavens LLC

Registration number: 50456518

Tax code: 02660767

Registered address: 40 Sayat-Nova Avenue, Yerevan, Armenia

Brand

Brand name: Heavens

Primary slogan: Live the Dream.

Supporting brand statement

A decade of commercial experience. A new generation of digital ambition.

Recommended contact email

info@heavens.am

This address should be created before launch.

2. Company Background

Heavens LLC has operated in Yerevan, Armenia, for more than ten years.

The company has experience across:

- import and export;
- international trade;
- wholesale and distribution;
- product sourcing;
- food and consumer goods;
- beauty and personal-care products;
- perfumes and fragrances;

- commercial partnerships;
- market development.

Heavens has now expanded into:

- information technology services;
- software development;
- web application development;
- mobile application development;
- digital platforms;
- online marketplaces;
- artificial-intelligence solutions;
- AI-powered content creation;
- business digitalization;
- social-media content;
- YouTube content;
- photography and video production;
- digital media production.

The website must present Heavens as an established commercial company that has expanded into technology and digital media.

It must not present Heavens as a newly created software startup.

3. Corporate Positioning

Primary positioning statement

Heavens LLC is a diversified Armenia-based company operating across international trade, consumer products, technology, digital platforms and media production.

Short company description

Heavens LLC is an Armenia-based company with more than a decade of experience across trade, consumer goods, beauty, technology, digital platforms and media production.

Long company description

Founded in Yerevan, Heavens LLC has built more than ten years of experience across international trade, import and export, consumer products, beauty, food and distribution.

Today, Heavens is expanding its capabilities into information technology, custom software, mobile applications, online marketplaces, artificial intelligence and digital content production.

We combine commercial experience with technology and creativity to build products, platforms and partnerships for Armenia and international markets.

Brand story

For more than a decade, Heavens has connected products, businesses and markets.

Today, the company combines its commercial experience with modern software, artificial intelligence and digital media to create new opportunities for businesses, partners and consumers.

4. Website Objectives

The website must:

1. Establish Heavens as a credible and professional Armenian company.
2. Communicate more than ten years of commercial experience.
3. Present traditional business activities and modern technology services.
4. Introduce Heavens brands and platforms, including Zeghch.
5. Generate enquiries from suppliers, partners and customers.
6. Support five languages.
7. Deliver excellent Core Web Vitals.
8. Provide strong international SEO.
9. Meet accessibility standards.
10. Look premium, modern and trustworthy.
11. Remain simple to maintain without a heavy CMS.
12. Avoid unnecessary frontend and backend complexity.

The website is a corporate marketing website, not a web application.

It does not initially require:

- authentication;
 - user accounts;
 - dashboards;
 - payment processing;
 - a database;
 - single-page application routing;
 - a global React runtime;
 - a large CMS;
 - a custom application backend.
-

5. Final Technology Stack

Framework

- Astro 6
- Static Site Generation
- Astro components
- File-based routing

- Zero JavaScript by default

Programming language

- TypeScript
- Strict mode enabled
- Runtime validation for form submissions and content
- No unjustified use of `any`

Styling

- Tailwind CSS v4
- CSS-first configuration
- `@theme` design tokens
- Logical CSS properties for LTR and RTL
- Minimal global CSS
- No legacy JavaScript Tailwind configuration unless required

Animations

- GSAP
- ScrollTrigger used selectively
- Native browser scrolling
- No Lenis
- No scroll hijacking
- Reduced-motion support required
- Animation code loaded only where required

Interactivity

- Native HTML
- Native TypeScript
- Progressive enhancement
- No React initially

React may be introduced later only when a genuinely complex interactive component requires it.

Content management

- Astro Content Collections
- Markdown for legal and editorial content
- YAML or JSON for structured content
- Zod schemas
- Build failure when required content is invalid
- No external CMS initially

Hosting

- Netlify
- Global CDN

- Preview deployments
- Production deployment from `main`
- Netlify Forms
- Netlify Image CDN where applicable

Forms

- Semantic HTML form
- Netlify Forms
- Fetch API enhancement
- Non-JavaScript fallback
- Honeypot spam protection
- Accessible validation messages
- No custom backend required initially

Analytics

Preferred:

- Plausible;
- Netlify Analytics;
- or another privacy-friendly analytics platform.

Optional analytics must not load before consent where prior consent is legally required.

6. Supported Languages

The website must support:

Language	Code	Direction
Armenian	<code>hy</code>	LTR
English	<code>en</code>	LTR
Russian	<code>ru</code>	LTR
German	<code>de</code>	LTR
Persian	<code>fa</code>	RTL

Use `hy` for Armenian.

Do not use `am` as the Armenian language code.

Native language names

- Հայերեն
- English
- Русский

- Deutsch
- فارسی

Localized route format

```
/hy/  
/en/  
/ru/  
/de/  
/fa/
```

Examples:

```
/hy/about/  
/en/about/  
/ru/about/  
/de/about/  
/fa/about/
```

Root URL behavior

The root URL ☐ must:

1. Respect a previously saved language choice.
2. Otherwise inspect the browser language.
3. Redirect to the closest supported language.
4. Use Armenian as the final fallback.

After the user manually selects another language, the site must not repeatedly force the browser language.

Direction handling

Persian:

```
<html lang="fa" dir="rtl">
```

Other supported languages:

```
<html lang="hy" dir="ltr">
```

Use logical CSS:

```
margin-inline-start  
margin-inline-end
```

```
padding-inline-start
padding-inline-end
inset-inline-start
inset-inline-end
text-align: start
```

Avoid designing layouts around fixed `left` and `right` values.

7. Website Information Architecture

Primary navigation

- Home
- About
- Business
- Technology
- Media
- Contact

Secondary navigation

- Our Brands
- Zeghch

Footer legal navigation

- Legal Information
- Privacy Policy
- Cookie Policy
- Terms of Use

Final route structure

```
/[locale]/
/[locale]/about/
/[locale]/business/
/[locale]/technology/
/[locale]/media/
/[locale]/brands/
/[locale]/brands/zeghch/
/[locale]/contact/
/[locale]/legal/
/[locale]/privacy/
/[locale]/cookies/
/[locale]/terms/
```

8. Visual Design Direction

The website must feel:

- premium;
- established;
- international;
- elegant;
- ambitious;
- modern;
- trustworthy.

It must not look like:

- a generic SaaS template;
- a crowded import catalogue;
- a cheap trading-company website;
- a cryptocurrency landing page;
- an overanimated experimental portfolio.

Recommended visual style

- Deep charcoal or midnight backgrounds
- Warm ivory sections
- Champagne or restrained gold accent
- Large editorial typography
- Strong contrast
- Generous spacing
- High-quality photography
- Controlled gradients
- Minimal glass effects
- Restrained premium animation

Suggested colors

Midnight:	#080A0D
Deep charcoal:	#111318
Ivory:	#F4F0E8
Soft white:	#FAFAF7
Champagne:	#C6A76D
Muted gold:	#A98A52
Stone:	#99958D

The final palette must pass accessibility contrast requirements.

9. Typography and Font Strategy

The website must support:

- Armenian;
- Latin;
- Cyrillic;
- Persian.

Do not assume one decorative font works well for every script.

Recommended strategy

- Premium display font for supported headings
- Highly readable multilingual body font
- Script-specific fallback fonts
- Separate font subsets where practical
- Self-hosted WOFF2 files
- Minimal font weights
- `font-display: swap`
- `unicode-range` for language subsets

CLS protection

Fallback and web-font metrics must be aligned using:

- `size-adjust`;
- `ascent-override`;
- `descent-override`;
- `line-gap-override`.

These values must be calculated from the selected fonts, not guessed.

Test CLS separately for:

- Armenian;
- English;
- Russian;
- German;
- Persian.

Only preload the critical font required above the fold.

Do not preload all language fonts globally.

10. Homepage Content

11. About Page Content

Hero

A decade of experience. A future driven by ambition.

Introduction

Heavens LLC is a diversified company based in Yerevan, Armenia.

For more than ten years, we have developed experience in trade, consumer products, beauty, sourcing and distribution. That foundation has given us a practical understanding of products, markets, partnerships and customer needs.

Today, Heavens is expanding into technology, software, artificial intelligence, online platforms and digital media.

Our journey

Heavens began with commercial activities across import, export and selected consumer-product markets.

Over time, we expanded our experience across food, beauty, perfume, personal care and distribution. We built relationships, learned how markets operate and developed a strong understanding of how businesses and consumers connect.

Our next chapter brings that experience into the digital economy.

We now work across software development, mobile applications, digital platforms, online marketplaces, AI-powered solutions and creative media production.

Mission

To connect commercial experience, technology and creativity in ways that create lasting value for businesses, partners and consumers.

Vision

To build a modern group of businesses and digital products originating in Armenia and serving both local and international markets.

Values

Ambition

We believe meaningful businesses begin with the courage to imagine something better.

Practical experience

Our decisions are grounded in real commercial experience and an understanding of customers and markets.

Quality

We aim for professional execution across products, technology, content and partnerships.

Trust

Long-term relationships depend on transparency, responsibility and consistent delivery.

Progress

We continue learning, adapting and investing in new opportunities.

12. Business Page Content

Hero

Commercial experience across products and markets.

Introduction

Heavens has more than ten years of experience across import, export, sourcing, distribution and selected consumer-product categories.

We work with partners to identify products, connect markets and develop commercially sustainable opportunities.

Services

Import and export

Support for sourcing, cross-border commercial activities and the movement of selected products between markets.

Wholesale and distribution

Commercial development and distribution support for suitable consumer products and business partners.

Product sourcing

Identification and evaluation of products, suppliers and partnership opportunities.

Market development

Support for brands and suppliers seeking to understand or enter relevant regional markets.

Product experience

Food and grocery

- Pistachios and nuts
- Rice
- Salt
- Chocolate and confectionery
- Coffee
- Dates and dried fruits
- Other selected food products

Beauty and personal care

- Perfumes and fragrances
- Skin-care creams
- Hair-care products
- Beauty products
- Personal-care products
- Other selected cosmetic categories

Compliance statement

Specific products, services and market availability may vary. All activities are subject to applicable legal, regulatory, customs, product-safety and commercial requirements.

Do not claim:

- licensed for all products;
- authorized for every type of import;
- government approved for all activities;

unless each claim is legally verified.

13. Technology Page Content

Hero

Technology built around real business needs.

Introduction

Heavens combines commercial experience with modern product development to create useful, scalable digital solutions.

We work across strategy, design, software, mobile products, artificial intelligence and online platforms.

Services

Software development

Custom software designed around business processes, operational requirements and customer needs.

Web applications

Fast, secure and scalable web products for companies, platforms and digital services.

Mobile applications

Mobile experiences designed for modern users across supported smartphone platforms.

Digital platforms

End-to-end development of digital products that connect businesses, services and customers.

Online marketplaces

Marketplace systems that support discovery, commercial relationships and digital transactions.

Artificial intelligence

Practical AI-enabled tools for content, automation, customer experience and business productivity.

Digital transformation

Modernization of business processes through software, automation and better digital workflows.

Process

Understand

We begin with the commercial problem, user need and intended outcome.

Design

We define the product experience, technical structure and implementation priorities.

Build

We develop reliable digital products using modern technologies and production standards.

Improve

We evaluate performance, user behavior and opportunities for continuous development.

14. Media Page Content

Hero

Content designed to be seen, understood and remembered.

Introduction

Heavens creates digital media for companies, products and modern online audiences.

Our approach combines strategy, visual storytelling, production and platform-specific content.

Services

Social-media content

Platform-ready visual and written content designed for relevant audiences and channels.

Video production

Creative and promotional video for companies, products, campaigns and digital platforms.

YouTube content

Planning, production and editing for long-form and short-form YouTube content.

Short-form content

Vertical video and social content designed for mobile-first platforms.

Brand content

Photography, graphics, campaign assets and storytelling aligned with a consistent brand identity.

AI-powered content creation

Responsible use of artificial-intelligence tools to support ideation, production and content workflows.

Do not claim market leadership unless independently verifiable.

15. Brands Page Content

Hero

Businesses and platforms built for meaningful growth.

Introduction

Heavens develops and supports businesses across commerce, technology and digital platforms.

Zeghch

Tagline

Deals every day, everywhere.

Description

A local digital platform helping customers discover offers, promotions and businesses across Armenia.

CTA

Visit Zeghch

17. Netlify Form Requirements

The rendered HTML must contain a real static form that Netlify can detect.

Required attributes:

```
<form
  name="contact"
  method="POST"
  data-netlify="true"
  data-netlify-honeypot="bot-field"
>
```

Required hidden input:

```
<input type="hidden" name="form-name" value="contact" />
```

Recommended hidden locale field:

```
<input type="hidden" name="locale" value="en" />
```

Use one stable internal form name across all languages.

AJAX must enhance the form rather than replace it.

The form must remain functional without JavaScript where practical.

The submission body must be URL encoded, not JSON.

After deployment, verify that the form appears in the Netlify Forms dashboard.

Website ownership

This website is operated by Heavens LLC.

Accuracy statement

Heavens LLC makes reasonable efforts to keep the information on this website accurate and current. However, information may be updated, corrected or changed without prior notice.

External links

This website may contain links to third-party websites. Heavens LLC is not responsible for the content, availability or privacy practices of external websites.

19. Privacy Policy Requirements

The Privacy Policy must explain:

- identity of the data controller;
- information collected through the contact form;
- processing purpose;
- legal basis where relevant;
- retention period;
- Netlify's role in form processing;
- analytics usage;
- cookies and local storage;
- international processing where applicable;
- access, correction and deletion requests;
- contact details.

Email: info@heavens.am

The final policy must match the actual technical implementation.

20. Cookie Policy and Consent

Essential storage

May include:

- language preference;
- cookie preference;
- security or spam-prevention data;
- strictly necessary form functionality.

Optional analytics

May include:

- website-usage measurement;
- traffic statistics;
- performance analytics.

Optional analytics must not load before consent where prior consent is required.

Banner copy

Heading

Your privacy choices

Text

We use essential technologies to operate this website and remember your language preferences. With your permission, we may also use analytics to understand how the website is used.

Buttons

- Accept analytics
- Essential only
- Cookie settings

The primary and rejection choices should have comparable visibility.

21. Terms of Use Requirements

The Terms of Use should cover:

- informational purpose;
- acceptable use;
- intellectual property;

- third-party links;
- service availability;
- limitation of liability where legally permitted;
- governing law;
- contact information.

These are corporate website terms.

Zeghch must maintain separate:

- customer terms;
- vendor terms;
- privacy policy;
- cookie policy.

22. Multilingual Content Architecture

UI translation dictionaries

```
src/i18n/
├─ config.ts
├─ utils.ts
├─ hy.ts
├─ en.ts
├─ ru.ts
├─ de.ts
└─ fa.ts
```

These dictionaries should include:

- navigation;
- buttons;
- form labels;
- form errors;
- cookie banner;
- accessibility labels;
- footer labels.

Localized Content Collections

```
src/content/
├─ pages/
│   └─ hy/
│   └─ en/
│   └─ ru/
│   └─ de/
```

```

|   └─ fa/
├─ services/
|   └─ hy/
|   └─ en/
|   └─ ru/
|   └─ de/
|   └─ fa/
├─ brands/
|   └─ hy/
|   └─ en/
|   └─ ru/
|   └─ de/
|   └─ fa/
└─ legal/
    └─ hy/
    └─ en/
    └─ ru/
    └─ de/
    └─ fa/

```

Translation requirements

Translations must be professionally reviewed.

Do not rely solely on machine translation for:

- legal documents;
- corporate claims;
- SEO titles;
- meta descriptions;
- commercial terminology;
- privacy and cookie language.

Every localized document should include a content version so outdated translations can be detected.

23. Recommended Project Structure

24. Astro Configuration Requirements

The Astro configuration must include:

- production site URL;
- static output;
- Netlify integration where needed;
- sitemap integration;
- all five locales;
- Armenian as default locale;
- prefixed default-language routes;
- trailing-slash policy;
- image configuration.

Conceptual configuration:

```
import { defineConfig } from "astro/config";
import sitemap from "@astrojs/sitemap";
import netlify from "@astrojs/netlify";

export default defineConfig({
  site: "https://www.heavens.am",
  output: "static",
  adapter: netlify(),
  integrations: [sitemap()],

  i18n: {
    locales: ["hy", "en", "ru", "de", "fa"],
    defaultLocale: "hy",

    routing: {
      prefixDefaultLocale: true
    },

    fallback: {
      de: "en",
      ru: "en",
      fa: "en"
    }
  }
});
```

Fallback content must not silently create incomplete translations without tracking.

25. Modern SEO Requirements

Every localized page must have:

- unique title;
- unique meta description;
- self-referencing canonical URL;
- translated Open Graph metadata;
- social-sharing image;
- correct `<html lang>`;
- correct `dir`;
- alternate-language links;
- `x-default`;
- valid heading hierarchy;
- indexability status;
- Organization JSON-LD;
- Breadcrumb JSON-LD where relevant.

Example canonical

```
<link
  rel="canonical"
  href="https://www.heavens.am/en/about/"
/>
```

Hreflang example

```
<link rel="alternate" hreflang="hy" href="https://www.heavens.am/hy/about/" /
>
<link rel="alternate" hreflang="en" href="https://www.heavens.am/en/about/" /
>
<link rel="alternate" hreflang="ru" href="https://www.heavens.am/ru/about/" /
>
<link rel="alternate" hreflang="de" href="https://www.heavens.am/de/about/" /
>
<link rel="alternate" hreflang="fa" href="https://www.heavens.am/fa/about/" /
>
<link rel="alternate" hreflang="x-default" href="https://www.heavens.am/en/
about/" />
```

The language switcher must link to the equivalent current page.

26. JSON-LD Structured Data

Use a central utility:

src/lib/structured-data.ts

Organization structured data

Include:

- legal name;
- brand name;
- official URL;
- logo;
- registered address;
- contact email;
- social profiles when available;
- founding year only after verification.

Conceptual JSON-LD:

```
{
  "@context": "https://schema.org",
  "@type": "Organization",
  "name": "Heavens LLC",
  "alternateName": "Heavens",
  "url": "https://www.heavens.am",
  "logo": "https://www.heavens.am/images/logo.png",
  "address": {
    "@type": "PostalAddress",
    "streetAddress": "40 Sayat-Nova Avenue",
    "addressLocality": "Yerevan",
    "addressCountry": "AM"
  },
  "email": "info@heavens.am"
}
```

Breadcrumb structured data

Use `BreadcrumbList` for internal pages such as:

- About;
- Business;
- Technology;
- Media;
- Brands;
- Legal pages.

Do not add unsupported:

- reviews;
- ratings;

- awards;
- leadership claims;
- service-area claims.

Structured data must be validated before launch.

27. XML Sitemap

Use Astro's sitemap integration.

The sitemap must include all public localized routes:

```
/hy/  
/en/  
/ru/  
/de/  
/fa/
```

and all translated pages under each locale.

The sitemap must not include:

- preview pages;
- test routes;
- private pages;
- duplicate URLs;
- redirect-only URLs;
- success pages that should not be indexed.

Expected URL:

```
https://www.heavens.am/sitemap-index.xml
```

or the exact sitemap path produced by the configured integration.

Sitemap workflow

Phase 4

Configure sitemap generation.

Phase 9

Validate:

- status code;

- valid XML;
- production domain;
- all required routes;
- no staging URLs;
- no duplicate routes.

Phase 11

Submit sitemap to relevant search-engine tools.

28. robots.txt

Create:

```
public/robots.txt
```

Production example:

```
User-agent: *  
Allow: /  
  
Sitemap: https://www.heavens.am/sitemap-index.xml
```

The exact sitemap filename must match the generated production output.

Do not accidentally block:

```
/_astro/  
/images/  
/fonts/  
/hy/  
/en/  
/ru/  
/de/  
/fa/
```

Preview and staging deployments should be protected from indexing separately.

Before launch, verify:

- `robots.txt` returns HTTP 200;
 - it references the correct sitemap;
 - production pages are allowed;
 - staging is not publicly indexed.
-

29. Social Metadata

Every page must include:

- Open Graph title;
- Open Graph description;
- Open Graph URL;
- Open Graph image;
- Open Graph locale;
- alternate Open Graph locales;
- Twitter card metadata where useful.

Social images must:

- use correct dimensions;
- contain readable text;
- avoid excessive small details;
- be localized where necessary;
- have stable production URLs.

30. Accessibility Requirements

Target:

WCAG 2.2 AA

Required:

- semantic landmarks;
- proper heading hierarchy;
- keyboard navigation;
- visible focus indicators;
- skip-to-content link;
- accessible mobile menu;
- accessible language selector;
- associated form labels;
- live-region form feedback;
- meaningful alt text;
- empty alt text for decorative images;
- sufficient contrast;
- reduced-motion support;
- no essential animated-only content;
- correct Persian RTL behavior;
- adequate touch-target sizes.

31. Animation Requirements

Approved animation use:

- hero reveal;
- image-mask reveal;
- section entrances;
- timeline progression;
- subtle parallax;
- restrained card interaction.

Avoid:

- mandatory intro screens;
- scroll locking;
- excessive cursor effects;
- continuous decorative motion;
- animating every paragraph;
- mobile-heavy 3D scenes;
- effects that delay access to content.

GSAP rules:

- animate `transform` and `opacity` primarily;
 - load only on pages that need it;
 - respect `prefers-reduced-motion`;
 - clean up ScrollTrigger instances;
 - test on average mobile devices;
 - avoid layout-heavy animations.
-

32. Image Requirements

Use:

- Astro image components;
- responsive images;
- AVIF or WebP where appropriate;
- explicit width and height;
- responsive `sizes`;
- lazy loading below the fold;
- prioritized hero media only when necessary;
- meaningful alt text.

Avoid:

- unoptimized background video;
- oversized PNGs;
- decorative images without dimensions;

- loading desktop-size images on mobile.

Assets imported through Astro's pipeline should use content-hashed output.

Files placed in `public/` keep stable filenames unless manually versioned.

33. Caching Strategy

Hashed Astro assets

```
/_astro/*
```

Use:

```
Cache-Control: public, max-age=31536000, immutable
```

HTML

Use:

```
Cache-Control: public, max-age=0, must-revalidate
```

Public files

Do not automatically assign immutable caching to every file in `public/`.

For fonts and other stable assets, use versioned filenames:

```
/fonts/heavens-latin-v1.woff2  
/fonts/heavens-armenian-v1.woff2  
/fonts/heavens-persian-v1.woff2
```

Only hashed or manually versioned resources should receive long-lived immutable caching.

Example Netlify headers

```
[[headers]]  
  for = "/_astro/*"  
  [[headers.values]]  
    Cache-Control = "public, max-age=31536000, immutable"  
[[headers]]
```

```
for = "/*.html"
[headers.values]
  Cache-Control = "public, max-age=0, must-revalidate"

[[headers]]
for = "/fonts/*"
[headers.values]
  Cache-Control = "public, max-age=604800"

[[headers]]
for = "/favicon.svg"
[headers.values]
  Cache-Control = "public, max-age=3600"
```

Production response headers must be tested after deployment.

34. Security Requirements

Configure:

- HTTPS;
- HSTS;
- Content Security Policy;
- X-Content-Type-Options ;
- Referrer-Policy ;
- Permissions-Policy ;
- protection against framing;
- safe external-link attributes;
- dependency scanning;
- secret scanning.

The contact form must:

- use honeypot protection;
- validate all input;
- avoid sensitive-data collection;
- reject oversized input;
- avoid file uploads initially;
- safely handle displayed messages.

No secrets may be exposed in client-side JavaScript or committed to Git.

35. Performance Requirements

The site must target:

- excellent Core Web Vitals;

- minimal JavaScript;
- minimal CSS;
- no global React runtime;
- no unnecessary third-party scripts;
- optimized images;
- optimized fonts;
- stable layout;
- no analytics blocking rendering.

Define budgets for:

- JavaScript per route;
- CSS size;
- initial image weight;
- total initial transfer;
- fonts;
- third-party requests.

Do not promise a permanent 100/100 Lighthouse score.

Treat Lighthouse as a quality measurement, not a guaranteed architecture result.

36. Quality Gates

Before production, verify:

- TypeScript strict checks pass;
- Astro build passes;
- content schemas pass;
- linting passes;
- formatting passes;
- no broken links;
- no placeholder content;
- all five languages exist;
- Persian RTL works;
- language switching preserves the page;
- all titles are unique;
- all meta descriptions are unique;
- canonical URLs are correct;
- hreflang is reciprocal;
- JSON-LD validates;
- sitemap is accessible;
- robots.txt is accessible;
- contact form is detected by Netlify;
- AJAX submission works;
- non-JavaScript submission works;
- analytics respects consent;
- security headers exist;
- fonts load correctly;

- CLS is tested per locale;
 - reduced motion works;
 - keyboard navigation works;
 - mobile navigation works;
 - no critical console errors remain.
-

37. Development Roadmap

Phase 0 — Business verification

Confirm:

- official legal company spelling;
- registered-address format;
- tax code;
- registration number;
- founding year;
- Heavens domain;
- Heavens email;
- relationship with Zeghch;
- active services;
- public product categories;
- social-media profiles.

Deliverable:

Approved company-information document

Phase 1 — Brand system

Define:

- final logo;
- slogan usage;
- colors;
- typography;
- photography;
- visual tone;
- favicon;
- social image;
- brand guidelines.

Deliverable:

Heavens visual identity system

Phase 2 — Content architecture

Approve:

- sitemap;
- page hierarchy;
- English master copy;
- service descriptions;
- commercial claims;
- legal content structure;
- image requirements;
- Content Collection schemas.

Deliverable:

Approved English content and information architecture

Phase 3 — Translation

Translation order:

1. English
2. Armenian
3. Russian
4. Persian
5. German

Tasks:

- professional translation;
- terminology review;
- legal review;
- SEO translation;
- proofreading;
- Persian RTL review.

Deliverable:

Five approved language packages

Phase 4 — Technical foundation

Implement:

- Astro project;
- TypeScript strict mode;
- Tailwind CSS v4;
- design tokens;

- locale routing;
- Content Collections;
- Zod schemas;
- sitemap integration;
- robots.txt;
- Netlify configuration;
- linting;
- formatting;
- CI checks.

Deliverable:

Production-ready project foundation

Phase 5 — Shared components

Build:

- layouts;
- header;
- footer;
- mobile navigation;
- language switcher;
- SEO component;
- structured-data utility;
- buttons;
- cards;
- section wrappers;
- cookie banner;
- contact form.

Deliverable:

Reusable multilingual component library

Phase 6 — Page implementation

Build in this order:

1. Home
2. About
3. Business
4. Technology
5. Media
6. Brands
7. Zeghch
8. Contact
9. Legal Information

- 10. Privacy
- 11. Cookies
- 12. Terms

Deliverable:

Complete English website

Phase 7 — Motion and visual refinement

Add:

- hero animation;
- section reveals;
- timeline animation;
- card interactions;
- reduced-motion alternatives;
- page-specific GSAP loading.

Deliverable:

Premium restrained motion system

Phase 8 — Multilingual integration

Add:

- typed dictionaries;
- localized content;
- localized metadata;
- localized social data;
- `lang` and `dir` ;
- equivalent-page language switching;
- hreflang;
- translation version checks.

Deliverable:

Complete five-language website

Phase 9 — SEO, accessibility and performance audit

Validate:

- titles;
- descriptions;
- canonicals;

- hreflang;
- JSON-LD;
- XML sitemap;
- robots.txt;
- Open Graph;
- accessibility;
- keyboard navigation;
- font loading;
- CLS;
- image optimization;
- bundle sizes;
- Core Web Vitals;
- security headers.

Deliverable:

SEO, accessibility and performance audit report

Phase 10 — Legal and production review

Review:

- legal information;
- privacy policy;
- cookie policy;
- Terms of Use;
- form data handling;
- analytics consent;
- company claims;
- translation accuracy;
- production configuration.

Deliverable:

Production launch approval

Phase 11 — Launch

Tasks:

- connect domain;
- configure DNS;
- enable HTTPS;
- deploy production;
- verify redirects;
- verify sitemap;
- verify robots.txt;
- submit sitemap;

- configure search tools;
- test forms;
- monitor errors;
- preserve rollback capability.

Deliverable:

Public Heavens website

Phase 12 — Post-launch maintenance

First-week checks:

- indexing;
- form submissions;
- broken links;
- translation problems;
- performance;
- mobile rendering;
- security headers;
- analytics.

Monthly checks:

- dependency updates;
 - legal review;
 - content updates;
 - broken-link scanning;
 - analytics review;
 - repository health;
 - brand and product updates.
-

38. Definition of Done

The website is production-ready only when:

- all five languages are complete;
- every localized route has a matching equivalent;
- Persian RTL is correct;
- company information is verified;
- all commercial claims are approved;
- contact email uses the Heavens domain;
- Netlify recognizes the form;
- form submissions work;
- spam protection works;
- legal documents match actual processing;
- unique SEO metadata exists;
- canonicals are correct;

- hreflang is correct;
 - Organization JSON-LD validates;
 - Breadcrumb JSON-LD validates;
 - sitemap is accessible;
 - robots.txt is accessible;
 - images are optimized;
 - fonts support all scripts;
 - CLS is acceptable per locale;
 - reduced-motion mode works;
 - keyboard access works;
 - mobile layout works;
 - security headers are active;
 - no unnecessary React runtime is shipped;
 - no placeholder content remains;
 - production monitoring is active;
 - launch approval is documented.
-

39. Final Approved Architecture

- Astro 6
- TypeScript strict mode
- Tailwind CSS v4
- GSAP with selective ScrollTrigger usage
- Native browser scrolling
- No React initially
- Astro built-in internationalization routing
- Armenian `hy`
- English `en`
- Russian `ru`
- German `de`
- Persian `fa`
- Automatic LTR and RTL handling
- Typed translation dictionaries
- Localized Astro Content Collections
- Zod schema validation
- Static Site Generation
- Netlify hosting
- Netlify Forms
- Netlify Image CDN where appropriate
- JSON-LD structured data
- Organization schema
- Breadcrumb schema
- XML sitemap
- robots.txt
- canonical URLs
- hreflang
- localized Open Graph
- consent-aware analytics
- WCAG 2.2 AA target

- security headers
- production caching rules
- professional translation review
